Here are some steps that you will need to perform after uploading the files

   1) In Push.js, create a unique key in this line of function PostSong()

data: { "field1": encodeURI(directory), "field2": SelectedSong, "field3": "UNIQUEKEY"},

   2) In PlaySong.php, create a unique key that matches the one in

if ($JamJockeyKey == " UNIQUEKEY ")

The above is a very weak method of limiting access the playsong functionality. The better solution will be in the security headwrs that I am adding to my httpd.conf now

   3) At the top of push.php just below the <body> tag, change the Jam Leader password

<body>

```
<?php
require_once 'protect.php';
Protect\with('login.php', 'JAMLEADERPASSWORD');
?>
```

   4) Create a folder called "Setlist" in the htdocs folder.

   5) **sudo chgrp** *daemon links.txt*

   6) Chown 774 links.txt

   7) Backup your httpd.cong or your entire environment before messing with httpd.conf

   In the DocumentRoot section of httpd.conf file, add "**Options –Indexes**"
  8)

```
DocumentRoot "/opt/bitnami/apache2/htdocs"
<Directory "/opt/bitnami/apache2/htdocs">
#
# Possible values for the Options directive are "None", "All",
# or any combination of:
```

```
    #    Indexes Includes FollowSymLinks SymLinksifOwnerMatch ExecCGI
MultiViews
    #
    # Note that "MultiViews" must be named *explicitly* --- "Options All"
    # doesn't give it to you.
    #
    # The Options directive is both complicated and important.  Please see
    # http://httpd.apache.org/docs/2.4/mod/core.html#options
    # for more information.
    #
    Options Indexes FollowSymLinks
    Options -Indexes
```

9) For now, remove spaces from directory names.
